Zhongda Leader Realizes Infinite Possibility In Automation Application

Motor Drivers Micro Motors Precision Reducers

Headquarters Ningbo Zhongda Leader Intelligent Transmission Co., Ltd.

Subsidiary
Ningbo Zhongda Chuangyuan Precision Equipment Co., Ltd.

Subsidiary
Foshan Zhongda Leader Drive Technology Co., Ltd.

Ningbo Zhongda Leader Intelligent Transmission Co., Ltd. was founded in 1998. It is an electromechanical automation enterprise integrating R&D, manufacturing, sales and service of motor drives, micro motors, precision reducers and integrated products. It has 9 branches and subsidiaries, over 1,800 employees, and a registered capital of 151.17 million yuan. In August 2017, it was listed on the A-shares of the Shenzhen Stock Exchange (stock code 002896).

The company is a national-level high-tech enterprise, leading and participating in the drafting of 10 national standards and 5 industry standards, maintaining 107 patents and 11 invention patents. It's owning a Zhejiang-level enterprise R&D center.

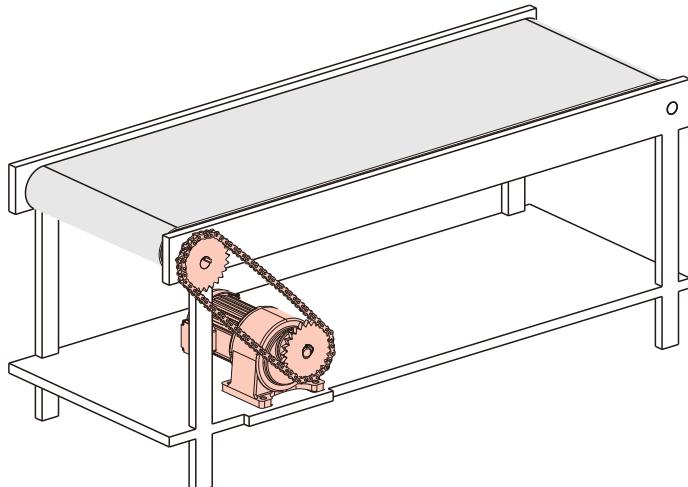

The company is based on intelligent and automation equipment core component manufacturers and design solution providers. With its differentiated and cost-effective advantages, the company's products are widely used in industrial robots, intelligent logistics, new energy, machine tools and other fields, as well as special machinery and equipment for food, packaging, textiles, electronics, and medical treatment. On the basis of realizing domestic substitution of imported products, gradually participate in international competition.

DRUM MOTOR DEVELOPMENT HISTORY

■ Use

Compared with the traditional drive system, the installation of drum motor is much easier, simpler, which means lower cost of designing and purchasing.

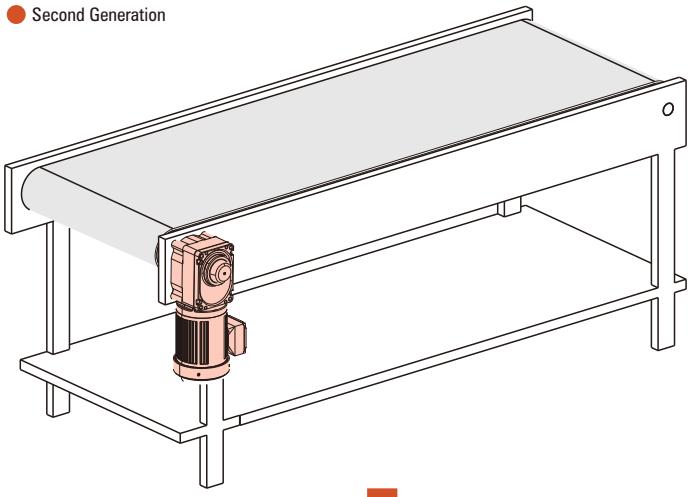

● First Generation

■ Durable

Even under severe conditions, full of water, dust, chemicals, oil, grease, even during high-pressure water washing, 113, 138, 165 series drum motors can normally operate.

● Second Generation

■ Sanitary Design

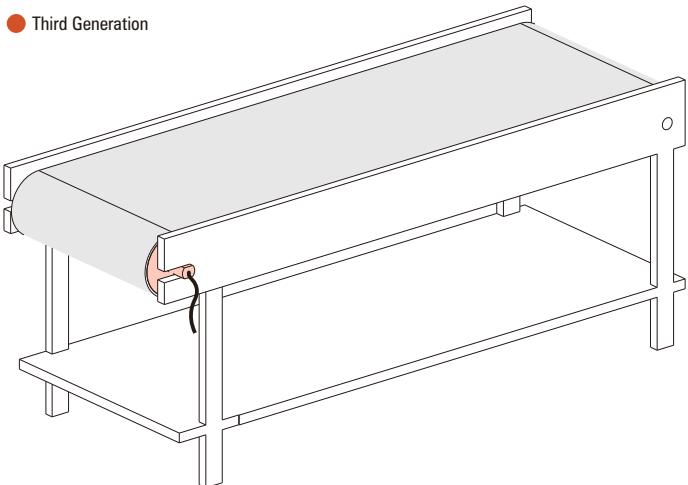

Due to the smooth stainless steel material, and tightly sealed and fully enclosed design, drum motor is easier to clean, thus reducing the risk of contamination in food processing.

- Safe voltage
- Super torque
- Speed regulation
- Conveying speed

■ Save Space

Because the motor, gearbox and bearings are installed inside of the drum, drum motor occupies less space.

● Third Generation

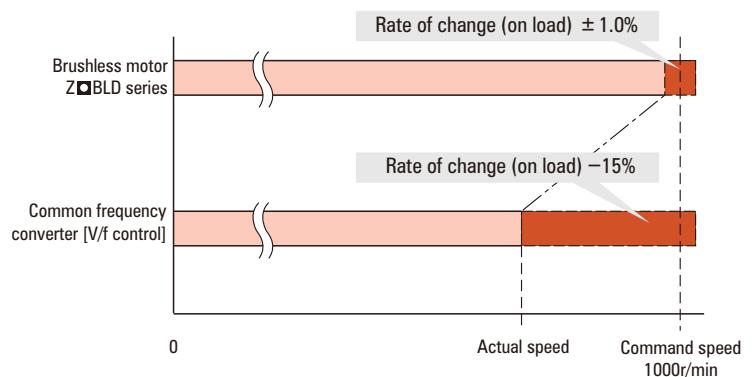

■ Security

As a complete unit with no protruding parts and fixed by external axial, drum motor is the safest drive system used for first-class transporting equipments.

GENERAL TECHNICAL INFORMATION—DC DRUM MOTOR

■ Stable Speed Control

Brushless motor continues to set speed and a feedback signal are compared from the speed of the motor to adjust the voltage applied to the motor; therefore, even if the load change, still can set the speed from slow instantaneous adjustment to, and in order to stabilize the running speed. Three phase induction motor with inverter control is not feedback control, so the load becomes larger, the speed will be greatly reduced; for the high speed stability requirements, it is recommended to use brushless motor.

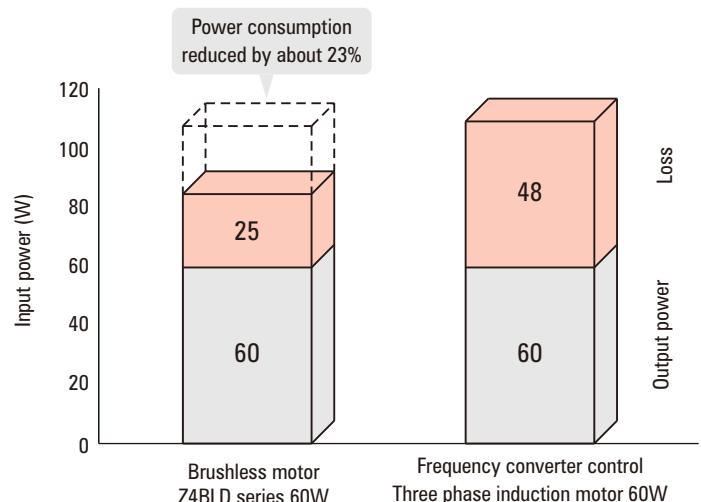

P04

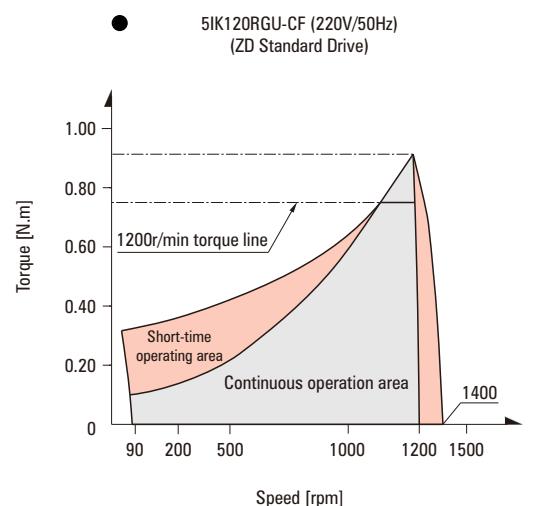

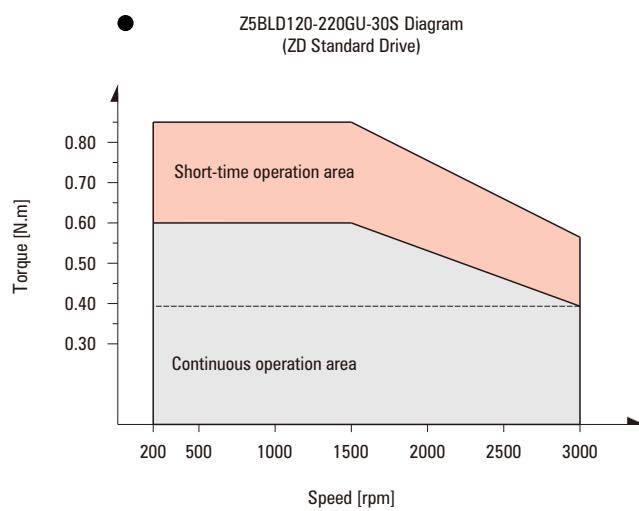

- Safe voltage
- Super torque
- Speed regulation
- Conveying speed

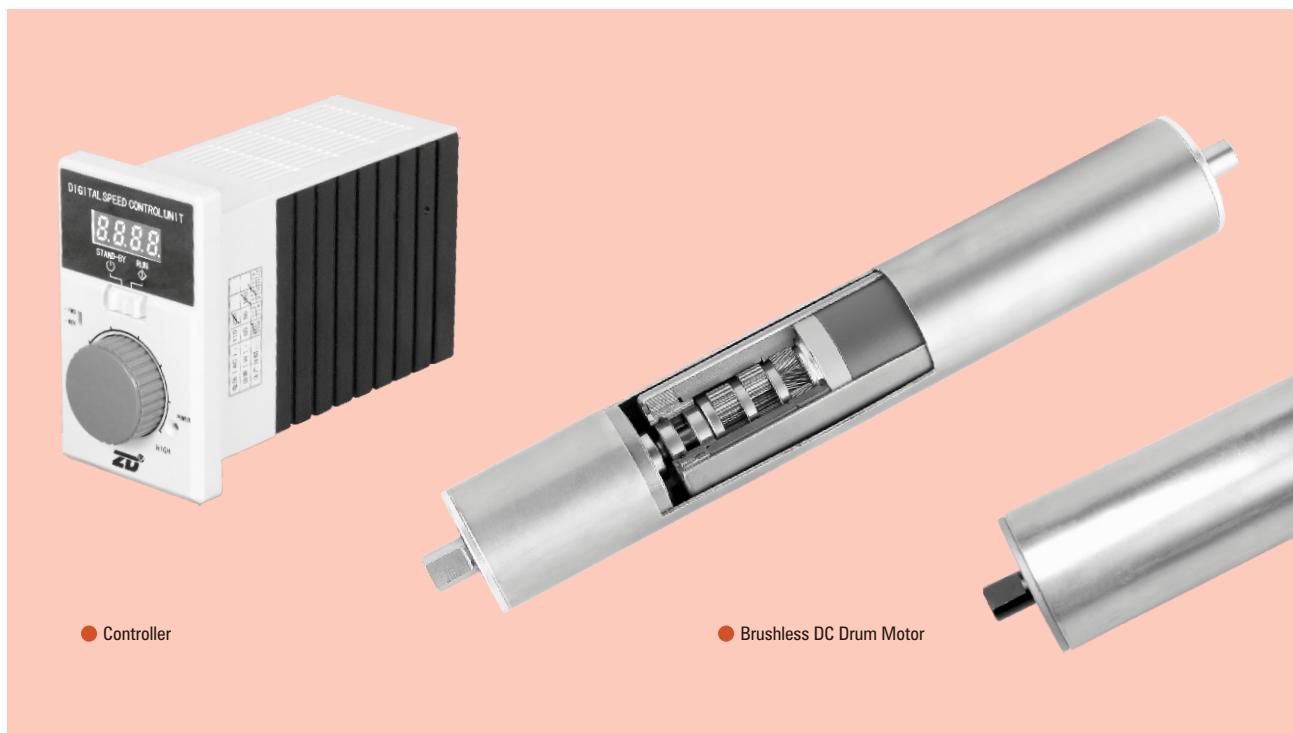

■ Contribute To Energy Saving

The rotor of the brushless motor is used for the permanent magnet, which can reduce the two loss of the rotor, so the power consumption is reduced by more than 20% compared with the three phase induction motor with variable frequency control, which is helpful for the energy saving of the device.

■ Low Speed And High Torque Performance
